VEHICLE ALIGNMENT

Isolation Mounted Engine Models

The stabilizer links and engine mounts should be checked for wear at regular intervals. Refer to Table 37.

Vehicle alignment is important. Vehicle stability is adversely affected if wheels are out of alignment. Major alignment of the front and rear wheel is partially controlled by one or two stabilizer links. One at the top of the engine and one at the front of the engine.

⚠WARNING

Do not change the adjustment of the link(s). Changing the adjustment as little as 1/3 turn could adversely affect motorcycle stability. Doing so could result in death or serious injury.

See your Harley-Davidson dealer for this service.

All Models

Vehicle alignment should be checked by dealer after major disassembly or diagnostic procedure.

⚠WARNING

Major vehicle alignment should be performed only by your Harley-Davidson dealer using Service Manual procedures. Improper vehicle alignment will adversely affect motorcycle handling and stability which could result in death or serious injury.

SHOCK ABSORBERS

See REAR SHOCK ABSORBERS section. Shock absorbers and rubber bushings should be inspected at specified intervals for leaks and bushing deterioration. Refer to Table 37.
